# OUTSTANDING FIRE PROTECTION

Fort Knox® strives to protect your valuables in the most extreme conditions. Without adequate fire protection a safe is useless against the damaging effects of heat, smoke, and pressure. A home fire burns hot and fast, consuming those items that matter most. At Fort Knox® we have engineered fire protection that allows our vaults to withstand the highest temperatures for the longest time. Combining time and temperature is essential, not just focusing on one and neglecting the other.

### FIRE TEST

To ensure maximum protection, Fort Knox® subjects our safes to rigorous tests that push our fire protection engineering to the upper limits. Testing includes placing our safe in an oven to recreate the intense temperatures of a house fire. We set thermocouples in the top, middle, and bottom of the vault to ensure consistent, reliable results. Testing vaults up to 1,680 degrees in 90 minutes while keeping the vault interior temperature below 350 degrees Fahrenheit makes Fort Knox® the leader in the industry (see graph on pg. 6).

### HEAT TRANSFER

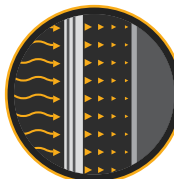

Fort Knox® safes are engineered to keep your valuables protected from the intense and violent heat of a fire. Our vaults are designed and engineered to minimize the transfer of heat from the outer body to the interior space. These features combined with thicker steel doors and safe bodies work to reduce heat transfer to the interior of the safe.

### FIRE LINER

Fort Knox® is the only company in the industry to use a fireboard manufactured with a proprietary blend of components that contain shrinkage compensating additives, called Type-C fireboard. Combining mechanical welded mounting studs and a thermal barrier, Fort Knox® achieves more fire protection without sacrificing space. The fire barrier has fire retardant capabilities and increased fibers that help fireboard retain their structural integrity.

### THERMAL BARRIER

Our safes have an engineered thermal break between the outer body of your vault and fireboard. This thermal break significantly reduces heat transfer by keeping scorching hot metal from touching the fireboard. The thermal barrier allows hot air to rise up the sides and circulate within the safe. This allows our fireboard to protect your valuables for a longer period of time in the event of a home fire.

### DUAL DOOR SEALS

Every Fort Knox® has two seals around its door – the first seal keeps smoke, caustic residues, and hot air from directly entering your safe until the second seal is heat activated. As the fire intensifies, increasing the safe temperature to 212 degrees, the second Palusol seal expands, creating a sealing effect around the door that prevents flames and extreme heat from directly entering your safe.

### MECHANICAL ANCHORS

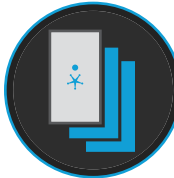

At Fort Knox®, we secure our fireboard components with metal mechanical anchors that are welded to the outer steel wall. Metal straps are used to secure the fireboard in place, giving support to our superior shelf standards. Other safe manufacturers use glue to adhere their non-proprietary fireboard directly to the steel wall of their safe. When exposed to temperatures of 500 degrees, the glue will melt and vaporize, causing fire board to separate and slump away from the walls of the safe. At 500 degrees, the glue will release toxic vapor that could leave a caustic residue, destroying valuables.

# PREMIUM THEFT PROTECTION

At Fort Knox®, we believe your valuables deserve the highest level of protection and security against hostile attacks. From tamper-proof engineering to the thickest steel doors and bodies in the industry, Fort Knox® vaults are built to deter even the most determined intruder.

### 100% DOOR PLATE COVERAGE

We construct every Fort Knox® vault door with dual steel security plates that cover 100% of the door—from top to bottom and side to side. To save money our competitors manufacture their composite doors with a security plate that only covers 60% of the door, or just the locking mechanism.

### SOLID WELDED SEAMS

Fort Knox® safes are made of American steel that is machine folded and formed to minimize joints. The few seams that remain are welded, inside and out, for 100% penetration. Some companies cut corners by using stitch welds. Stitch welds leave gaps along the joints, making the safe weaker and more susceptible to attack, heat, and fire damage.

### SAFE WITHIN A SAFE

Fort Knox® safes are made of the thickest, high-grade steel bodies to ensure your valuables stay secure. Customize your vault by adding torch-resistant stainless steel, drill-resistant ArmaKnox® AR500 steel, or multiple layers of carbon steel to the interior for a total of 4 additional steel liners—essentially creating a safe within a safe—for maximum protection.

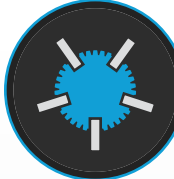

### CORNER BOLTS

Fort Knox® locking bolts are among the thickest diameter in the industry, at 1.5 inches. Our specially designed corner bolts option provides maximum protection against intruders attempting to pry the doors corner.\*

\*Standard on Legends, Titans and Guardians. Optional on Defenders, Protectors and Executives.

### MULTIPLE RELOCKERS

Fort Knox® uses multiple re-lockers in a variety of locations throughout the door. By adding multiple re-lockers, the Fort Knox door will foil attacks from any direct assault. Don't settle for only one line of defense; multiple re-lockers are essential for maximum security.

### SLIP-CLUTCH HANDLE

Our handles include a mechanism that will intentionally slip if the handle is forced or overturned. This will protect your lock and door mechanisms from damage.\*

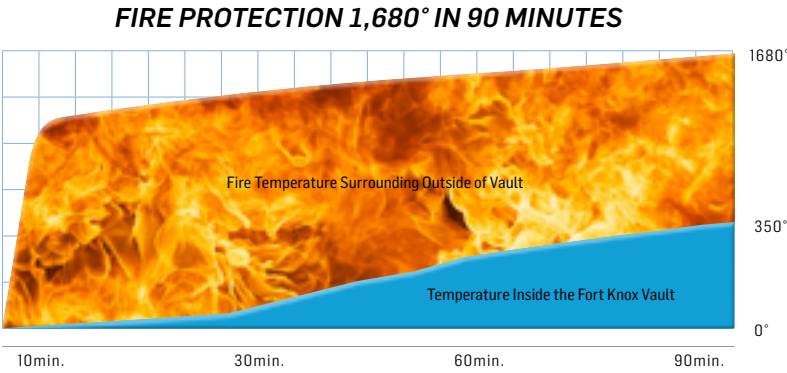

\*Not available on Spartan Models.

# THE FORT KNOX DIFFERENCE

### FIRE TESTING

*Comprehensive Fire Simulation*

Nine thermocouples are placed evenly from top to bottom as per UL72 standards. Because air at the top of the vault can be hundreds of degrees hotter than the air at the bottom, the test is terminated once the first sensor reaches 350 degrees. These testing standards ensure an honest reliable test.

### LIFETIME WARRANTY

*The Best Warranty in the Industry*

#### GUARANTEED AMERICAN QUALITY

Fort Knox® warrants to the original purchaser that each new safe will be free from defects in material and workmanship for the lifetime of the original purchaser from the date of delivery. Integral units such as locks are subject to this same warranty.

#### BURGLAR ATTACK

Fort Knox® will repair or replace any vault damaged due to an unlawful or forced attempt during the lifetime of the original purchaser.

#### INCIDENTAL DAMAGE PROTECTION

Fort Knox® will repair or replace, at our option, any vault due to incidental damage as a result of accident, flood, or fire.

*Go to [www.FTKNOX.com](http://www.FTKNOX.com) for written warranty and customer freight responsibilities.*

### MAKE IT A BUNDLE

*Combine and Save*

#### COMBINE AND SAVE

Customizing your safe has never been easier. We have taken the most popular accessories and combined them into Bundle packages. Select Bundle in the Accessories tab of our Vault Builder. Bundle packages vary based on Size and Model.

TWO BUNDLE OPTIONS BASED ON MODEL	
SPARTAN/MAVERICK	DEFENDER/PROTECTOR/EXECUTIVE:
-Door Organizer	-Corner Bolts
-Lights	-Lights
-Hinge Caps	-Pull Handle
-Dehumidifier	-Dehumidifier

\*Sizes 4026 & 6026 Bundle: Lights, Dehumidifier, & Door Upgrade

# FAQ'S

## SECURITY

*More Steel = Higher Security*

#### WHY IS THE STEEL PLATE IN THE DOOR SO IMPORTANT?

Fort Knox® dual steel door plates cover 100% of the door, top to bottom and side to side. This provides up to 1" of steel in the door and insures the best protection against door attacks. Other safe manufacturers sell a composite door and security plate that only covers 60% of the door. This leaves only a thin shell covering the face of the door and only partial coverage to support the lock and handle, giving their safe the illusion of strength and security.

#### WHY ADD MORE INNER-STEEL LINERS TO MY VAULT ?

Additional steel increases security. Fort Knox® allows you to add up to 4 additional 10-gauge steel liners to protect what matters most. Add a layer of 3/16-inch AR500 steel to withstand cutting/drilling, a 10-gauge stainless steel liner to counter torch attacks, or multiple carbon steel liners to increase strength and security. Combine liners to optimize the protection needed.

#### ARE CORNER BOLTS NECESSARY IN THE DOOR?

Corner bolts provide additional protection against pry attacks which will usually start at the corner of the door.

## FIRE PROTECTION

*Block The Flames*

#### WHAT BENEFIT DOES INFERNO SHIELD ADD TO MY VAULT?

Choosing the correct fire protection is one of the most important decisions of your vault purchase. Fort Knox® offers different levels of fire protection: The Spartan 1,450° in 50 minutes and the Maverick 1,200° in 75 minutes. The Defender, Protector, Executive, Guardian, Titan and Legend are all standard with the 1680° in 90 minutes. Our Home Safes come standard with our highest fire rating of 1,680° in 120 minutes. Add additional fireboard to improve fire resistance.

#### DOES THE TYPE OF FIREBOARD MAKE A DIFFERENCE?

Fort Knox® uses superior proprietary Type C fireboard that contains shrinkage compensating additives, this blend of fibers helps the fireboard retain its structure and fire-retardant properties during extreme temperatures. Many other manufacturers use regular drywall or Type X that will lose its structural integrity and fail during high temperatures.

#### HOW DO THE DOOR SEALS ASSIST IN FIRE-PROTECTION?

Fort Knox® utilizes dual door seals which work in unison against fire and smoke. The flexible seals slow heat transfer and harmful damaging smoke from entering the vault at low temperatures. The second seal is heat activated, swelling as temperatures increase, keeping harmful elements from entering the vault.

## KEY FEATURES

*The Difference Is In The Details*

#### WHAT SIZE VAULT SHOULD I BUY?

The main factors that should be considered when choosing a size:

- Number of long guns
- The size, shape and volume of other valuable items
- Where the safe will be installed

Always buy the next size larger than you think you'll need, allowing your vault to accommodate your growing collection.

#### FORT KNOX PROVIDES THREE TYPES OF LOCKS:

**Mechanical Dial:** Reliable, and EMP proof (will not be affected by an electro magnetic pulse.)

**Electronic Lock:** Quick access, and EMP resistance;

**Redundant Lock:** Combines both benefits of the mechanical and electronic, allowing ease of access, and EMP proof.

**Biometric Lock:** Quick access. Unlock your safe with your fingerprint. Enroll up to 15 fingerprints.

#### HOW DO I DETERMINE THE LOCK I NEED?

**Mechanical Locks** offer a more traditional look and style, providing you long term dependability and little maintenance. **Electronic Locks** are increasing in popularity because of their ease, speed, and convenience. The electronic lock with its easy to read key pad is simple to use and allows the owner to easily add or change their combination. Batteries are needed and are easily changed.

**Redundant Locks** combine the traditional mechanical style lock and the electronic lock. The combination of mechanical and electronic gives you the choice of using the traditional mechanical lock to open your vault or have the ease and convenience of the electronic lock.

#### WHAT IS THE DIFFERENCE BETWEEN INTERNAL AND EXTERNAL HINGES?

Internal hinges open slightly past 90 degrees and give a vault a sleek minimalistic look, while external hinges open to a full 180 degrees. Hinges are a preference and do not impact your safe or vault door's security or fire protection.

## PAYING FOR YOUR VAULT

*Flexible Plans on Any Budget*

#### IS FINANCING AVAILABLE?

Once you determine which safe is best for you, financing is available to make the necessary purchase to protect what matters most to you. Flexible payment plans are available on any budget. Find local dealer at [www.ftknox.com/find-a-dealer](http://www.ftknox.com/find-a-dealer)

# GUARDIAN VAULT

## Personalized Precision Vault

Other manufacturers can only hope to build a safe with the features and precision of the Guardian Vault. The Guardian starts with a 3/16" outer body, 90 minutes fire protection, 10-gauge inner steel liner, 18 locking bolts, including 4 corner bolts, 5/8" door edge thickness and add a stout 10-gauge inner carbon steel liner.

### VAULT FEATURES

- FIRE PROTECTION ..... 1680°F In 90 Minutes
- OVERALL BODY STEEL THICKNESS ..... 5/16"
- DOOR EDGE STEEL THICKNESS ..... 5/8"
- CORNER BOLTS ..... Standard
- LOCKING BOLTS ..... 18

Guardian 7251	72"	51"	27"/30"	57 Cubic Feet	2,100 Lbs.	20
Guardian 7261	72"	61"	27"/30"	69 Cubic Feet	2,250 Lbs.	20

# TITAN VAULT

## Securing Your Possessions

The Titan Vault begins with a 3/8" thick dual body constructed of a 3/16" carbon steel body and 3/16" ArmaKnox® AR500 inner steel liner. The standard inner AR500 steel liner gives you safe-within-a-safe style security providing superior protection. In addition to dual steel bodies the Titan has a massive 3/4" door edge thickness held in place by 18 locking bolts.

### VAULT FEATURES

- FIRE PROTECTION ..... 1680°F In 90 Minutes
- OVERALL BODY STEEL THICKNESS ..... 3/8"
- DOOR EDGE STEEL THICKNESS ..... 3/4"
- CORNER BOLTS ..... Standard
- LOCKING BOLTS ..... 18

Titan 6637	66"	37"	27"/30"	36 Cubic Feet	1,810 Lbs.	20
Titan 7241	72"	41"	27"/30"	45 Cubic Feet	2,160 Lbs.	20
Titan 7251	72"	51"	27"/30"	57 Cubic Feet	2,530 Lbs.	20
Titan 7261	72"	61"	27"/30"	69 Cubic Feet	2,705 Lbs.	20

# LEGEND VAULT

## When Only The Best Will Do

The industry-leading Legend Vault offers a 1/2" steel body comprised of layered carbon steel, stainless steel and AR500 steel. The Legend has maximum theft and breach protection against cutting or torching. The 55 rack and pinion matching machined gears give the Legend an exclusive opening system that only Fort Knox provides.

In-Swing 8248	85"	53"	1,580 Lbs.	19	76" x 38"	82" x 48"

# VAULT DOOR OUT-SWING

## Rest Assured

Fort Knox® vault doors ensure all of your valuables are safe and secure. Available in two different sizes, 8240 & 8248, each vault door is built from thick, hardened steel. Need extra protection? Add additional steel layers of cut-resistant AR500 steel, torch-resistant stainless steel, or carbon steel. Only Fort Knox® gives you complete theft protection.

# VAULT DOOR FAQs

Know Before You Buy

## HOW DO I PREPARE FOR MY VAULT DOOR?

Measure the Rough Opening, the recess in the wall in which the Vault Door will be installed. Prepare the area by removing sheetrock and framing, leaving bare concrete ready for installation.

Standard Rough Openings:	82"H x 40"W	82"H x 48"W
--------------------------	-------------	-------------

## WHAT IS MY WALL THICKNESS?

Your Vault Door clamp frame dimensions are specific to your wall thickness, to ensure a proper installation. Wall thickness **must** be specified at time of order.

Standard Clamp Frame Width:

IN-SWING	5.75" - 7.5"	7.5" - 9.5"	9.5" - 11.5"	11.5" - 13.5"
OUT-SWING	4.5" - 6.5"	6.5" - 8.5"	8.5" - 10.5"	10.5" - 12.5"

*\*Custom Thickness Available*

## HOW DO I DECIDE IN-SWING VS. OUT-SWING?

In-Swing doors can be used as a storm shelter or panic room in the event the door is blocked from the outside. The in-swing door is also ideal for hiding or concealing the location of your vault. Out-swing benefits those with limited vault room space.

## WHAT IS RIGHT SWING VS. LEFT SWING?

We define right vs left swing based on which side the hinges are on. Standing outside the room facing the front of the door your hinge will be on the right or the left. In the picture shown the door is a right swing.

## WHAT IS THE DIFFERENCE BETWEEN CONCEALED HINGE & EXTERNAL HINGE FOR OUT-SWING?

Out-swing safes allow for the option of choosing an internal(hidden) hinge opening to 110 degrees, or an external hinge allowing 180° swing radius.

# SECURITY BOXES

Lock your handguns or possessions in the strongest and most secure personal security box. Fort Knox® security boxes and handgun safes meet the highest standards and exceed all California Department of Justice requirements. *Security boxes are not rated for fire protection.*

*Lifetime box warranty, Lock covered by lock manufacturer.*

## ORIGINAL PISTOL BOX

*The Heaviest Pistol Box on the Market*

The Original Pistol Box offers a quick access lock and a strong, heavy design. Constructed of a rugged 10-gauge body and a massive 3/16" wrap around door, this box exceeds the California Firearms Safety Device Requirements.

ORIGINAL PISTOL BOX: 12½"L X 10¾"W X 4¼"H 22LBS

## PISTOL BOX

*Protect your valuables*

Choose from one of these three sizes for maximum storage. These new high-security Pistol Boxes are constructed with a heavy 10-gauge body and 3/16" plate door. The 6" deep version (Auto) is great for an automobile while the 12"(Personal) can be used in many applications. The larger Shotgun box is great for storing your self defense shotgun for quick easy access.

AUTO PISTOL BOX: 6"L X 9"W X 5"H, 13LBS

PERSONAL PISTOL BOX: 12"L X 9"W X 5"H, 20LBS

SHOTGUN BOX: 45"L X 9"W X 5"H, 54LBS

## CONTROLLED ACCESS BOX

*Privacy Lock Box*

The Controlled Access boxes are great for storing ammo and other valuables. They can be used as a standalone security container or inside your vault for an additional layer of security. They come in three sizes for your convenience.

CAB20: 20"L X 16"W X 9"H, 43LBS

CAB24: 24"L X 16"W X 9"H, 55LBS

CAB28: 28"L X 16"W X 9"H, 63LBS
